An Inconvenient Deception: How Al Gore Distorts Climate Science And Energy Policy

Synopsis

Updated 2nd Edition: Al Gore's new movie *An Inconvenient Sequel: Truth to Power* is reviewed for its accuracy in climate science and energy policy. As was the case with Gore's first movie (*An Inconvenient Truth*), the movie is bursting with bad science, bad policy and some outright falsehoods. The storm events Gore addresses occur naturally, and there is little or no evidence they are being made worse from human activities: sea level is rising at the same rate it was before humans started burning fossil fuels; in Miami Beach the natural rise is magnified because buildings and streets were constructed on reclaimed swampland that has been sinking; the 9/11 memorial was not flooded by sea level rise from melting ice sheets, but a storm surge at high tide, which would have happened anyway and was not predicted by Gore in his first movie, as he claims; the Greenland ice sheet undergoes melt every summer, which was large in 2012 but then unusually weak in 2017; glaciers advance and retreat naturally, as evidenced by 1,000 to 2,000 year old tree stumps being uncovered in Alaska; rain gauge measurements reveal the conflict in Syria was not caused by reduced rainfall hurting farming there, and in fact the Middle East is greening from increasing CO₂ in the atmosphere; agricultural yields in China have been rising, not falling as claimed by Gore. The renewable energy sources touted by Gore (wind and solar), while a laudable goal for our future, are currently very expensive: their federal subsidies per kilowatt-hour of energy produced are huge compared to coal, natural gas, and nuclear power. These costs are hidden from the public in increased federal and state tax rates. Gore is correct that "it is right to save humanity", but what we might need saving from the most are bad decisions that reduce prosperity and hurt the poor.

Customer Reviews

The author of this Kindle book is Dr. Roy Spencer, who is largely responsible for developing and interpreting the NASA satellite measurements of global temperature. Perfect background for looking at Al Gore's claims in his recent movie (*An Inconvenient Sequel*) and book (*Truth to Power*) on climate change. The book (*An Inconvenient Deception*) is a careful account of the major topics discussed in the movie and book. There is also a useful background discussion of Mr. Gore's earlier movie (*An Inconvenient Truth*), although much more could have been said about it. (For example, Dr. Spencer does not mention the UK court case resulting in a requirement that all viewers be provided access to the court decision identifying nine major errors in the movie.) Dr. Spencer provides a very readable description of each of the major claims in the movie, coupled with the scientific observations in each case. For example, Mr. Gore claims that temperatures have caused an unprecedented melting of glaciers worldwide, yet Spencer shows a photograph of 1000-year-old tree trunks exposed by receding glaciers proving that the glaciers had previously melted back at least that far. Although in many cases, Mr. Gore does not actually lie, he does skirt the full truth by implying that all the disasters he focuses on have been caused by man. Spencer is particularly good in showing that man can contribute on the order of 1% of the actual energy available to Nature, which makes attribution of any particular disaster to man a very iffy thing. In at least two cases, however, Mr. Gore does make clearly untruthful claims. He attributes the present Syrian civil war to a prolonged drought, whereas Spencer provides precipitation records showing that drought occurred in only one of the 5 years between 2006 and 2010, and that the entire Mid-East benefited from the increased greening made possible by increasing CO₂. Spencer states that the fall in food production was more directly caused by the Assad regime tripling the price of diesel fuel and making it impossible for farmers to harvest their crops. The second untruthful claim by Gore is that China's corn and wheat yields decreased by 5% in the last few decades (He also predicts an enormous 1/3 drop in US yields from heat stress alone). Yet Spencer presents evidence showing steady increases in both Chinese and US corn and wheat yields for the last 70 years. Spencer's approach is quite low-key, just a patient marshaling of scientific evidence. I read the book in about half an hour and

recommend it highly.

Award winning Climate scientist Dr. Roy Spencer has written a point by point rebuttal of the latest volume of agenda driven propaganda masquerading as "science", generated by St. Al Gore the Large of the Church of Global Warming. Dr. Spencer dismembers Gore's pack of half truths, lies and bogus assertions like a surgeon removing a tumor. Unlike NON SCIENTIST Al Gore the Wealthy, Dr. Spencer is a TRAINED SCIENTIST, not a hypocritical opportunist hack who consumes more energy than 34 American families, and has made MILLIONS selling the Global Warming hoax to gullible sheep. In clear, concise language, Dr. Spencer provides examples of REAL SCIENCE and DATA to counter Al Gore the Wealthy's bloviating that humans are polluting the atmosphere with the trace gas CO₂. Manmade Climate Change = Climastrology

A well documented book regarding Al Gore's claims that we are killing the planet by causing too much CO₂. We are not the cause of failure but the earth is a finely tuned eco system that will support us for years to come and don't need to spend three times as much for renewable energy.

This book clearly shows how Mr. Gore is using his books and movies to spread false information. Whether he is lying, or is just colossally ignorant about his subject, doesn't really matter -- he has been wrong repeatedly.

This is an outstanding book that finally sets the record straight on all the misinformation about Climate Change. It is a must read for anyone and everyone interested in our environment.

This exposes a lot of the lies and group think around the whole climate change discussion and the hypocrisy of Al Gore. It's about time we heard this side of the story!

A quickie job and a take down of the new movie. But, the new Al Gore pic is so pathetic, everybody more or less sees through it.

Helpful as usual for Dr. SPENSER. Every good boy does fine. The quick brown fox jumped over the lazy dog
