"Art Ludwig's books inform and inspire us... They are survival guides in the age of global warming." --Satish Kumar, Editor, Resurgence magazine

There has been nothing short of a revolution in the way greywater is managed and regulated. It has been a thrill to be at the forefront of this transformation since 1990. We exist at a neutral crossroads between regulators, installers, manufacturers, and researchers. This has positioned us well to be the main provider of accurate greywater information over this time span. Whether you have every one of our previous editions, or are brand new to greywater, I think you'll really get a lot out of this new edition--our best ever. (Note: Our Builder's Greywater Guide has also just been revised and has the latest on regulations and research).

Well written, beautiful photos.

Delivered on Time. Was what I was told and wanted. Great !!!! Packaging was very good.

Great book, a must have if you are interested in gray water.

Fantastic information. I'm loving it!

Good book. Gives you a lot to think about.

Finally - a book that covers the basics, and yet is technical enough to where I can hand it to a plumber. In my case, the greywater I wanted to capture was from the roof, but it covers everything from pee to rainwater.

This is a seriously practical book. If you are thinking grey water or urine diversion you really need to read this book first.

Having used Art Ludwig's previous edition of "Create an Oasis with Greywater" as the bible of the greywater movement, I was excited to see the additional information and insights in this newest, 6th edition. Mr. Ludwig has expanded the book to include more about integrated design for water conservation, as it is sub-titled. This book comes out of Art's continual exploration and investigation

of better, more efficient, and more sustainable greywater systems and includes ways they may be integrated with other water reuse, rainwater harvesting and sustainable landscaping. Mr. Ludwig had not yet developed the Laundry to Landscape system when I bought his 5th edition, printed in 2006. In the meantime, L2L has become probably the most frequently installed greywater system in the world. It is currently the only greywater system that can be installed without a permit in the state of CA, as long as eleven basic conditions are followed.

<http://www.santabarbaraca.gov/civicax/filebank/blobdload.aspx?BlobID=154562> The addition of the information on Laundry to landscape is reason enough to buy this book. Figure 7.5: Laundry to landscape system takes up a full two pages, and is easy to read and very detailed. It shows options, locations, sequence and shape of many of the materials for the system, and is an invaluable resource on its own. The section "Experimental Adaptations for High-Efficiency Washers" is very welcome, since many washers are now HE and their unique characteristics and challenges are important to address. As stated in the introduction, this book has nine times more information as in the first edition. I urge anyone interested in greywater reuse, for their own home or as a professional, to buy this book, even or especially if you have a previous edition of 'Create an Oasis with Greywater'. It is a must-have resource for a sustainable water future.
