I honestly love this book and it's an amazing concept for kids with great visual aids. I'm a 100% hands on visual learner myself and see that as well in my son whom we bought this for. As other reviewers have mentioned it would better if the parts were made of a plastic material instead of fiberboard. My son desperately wants to play with this on his own but we won't let him since the parts will get torn. BUT for the price I have to say it's 100% worth is.

The gears and rods are mere paperboard--basically single-ply cardboard--with lots of little, thin, translucent plastic washers. It's very difficult to remove the gears and all from the peg board without bending or tearing them, especially the narrow rods, and it's also hard to secure the pieces onto the peg board without tightening the plastic washers so much that they can't turn or they bend and tear when you try to turn them. My son was so excited when this came in and we opened it, but I soon had to take it away because \*my\* very careful handling had managed to tear a couple pieces almost right away. Extremely disappointing quality. Poor kid.

This is probably the best book I've seen for a child and parent experience. This book not only sharpens critical thinking skills, but also explains how cars and their systems work. This is a fantastic gift for ages 3+ IF they are doing it with their parents (and hey, this is the PERFECT book to use with your kids). Both parent and child stand to learn something from using this book! There is a compartment with all diorama pieces, and peg-boards. They go in depth, but not too far.

Great idea! My son really enjoyed this book. He's ten so he could do all the activities himself, but a young child could do this with parents. Pieces are sturdy cardboard and can take a lot, but they can tear.

Arrived w a piece broken in front. Cool book and concept. Pieces made of cheap cardboard and kind of hard to move gears.

This is a great kit for explaining the mechanisms that go into making a car work. It comes with heavy cardboard pieces and plastic bolts and wing nuts that you use to make the various car part. We have made several of these and it really is fun to see the kids "get" it and connect with how a real

car works. I would highly recommend this kit for kids that have an interest in cars.

The parts are made of cardboard and easily tear. Broken a piece my first time using it.

My 4 and 6 year old grandsons love this. I like the interaction they can do
