Customer Reviews

Paramedic: Pharmacology Applications uses a case-based approach to cover all aspects of pharmacology relevant to prehospital providers. Information pertaining to dosages, drug interactions, indications, and contraindications is included. The text meets the objectives outlined in the Paramedic National Standard Curriculum.

This book is a superb piece of work from a teaching and a learning point of view. The author has put aside the traditional way of teaching a raw discipline, customarily full of information difficult to retain. The subject is taken into a new dimension, dividing by different clinical applications each one with a previous pathology, physiopathology, clinical characteristic and the pharmacological management required for each case. For example, respiratory emergencies are extensively reviewed, its different physiopathologies are described, the clinical characteristics common to each one, and the pharmacological treatment recommended in the prehospital setting. Every chapter is

written the same way, thus providing the reader with a unique opportunity to blend over in a whole view the physiopathology, the clinical aspect and the pharmacological management in the field of an illness. I have no doubt this book contributes greatly to make young paramedics competent clinicians, and allow senior paramedics to hold their titles as Masters of Clinics.

great workbook to use with Emergency care in the streets (Nancy Caroline)

Good price

Mandatory for my Paramedic School, it's a great book that doesn't over explain. Also written to be easily read (unlike Moseby's).

This book is all in black and white? We are not in the 1800's anymore. The content is informative, but I was expecting colored pics. :(

waste of money, never even opened it.
