Introduction To Homeland Security, Fourth Edition: Principles Of All-Hazards Risk Management

Synopsis

Bullock, Haddow, and Coppola have set the standard for homeland security textbooks, and they follow up their #1-selling third edition with this substantially improved version. Students will value the decades of experience that the authors bring to their analysis, and the new edition offers still more research-based data to balance the field-tested practical information included in each chapter. Additionally, links to the most current online government information help to keep the text up-to-date in this rapidly developing field. As with its predecessors, the book clearly delineates the bedrock principles of preparing for, mitigating, managing, and recovering from emergencies and disasters. However, this new edition emphasizes their value with improved clarity and focus. **NEW TO THIS EDITION:** This edition has been thoroughly revised to include changes that are based both on changes relevant to the political, budgetary, and legal aspects of homeland security that have changed since the 2008 Presidential election (and subsequent change in the administration), but also in recognition of an expanding academic demand that is both larger in size and changing in scope (most notably with regard to an increase in the number of government employees and officials who are taking courses that have adopted the text). These include: an expansion of material on the organization of the Department of Homeland Security; strategic and philosophical changes that are recommended and/or that have occurred as a result of the Quadrennial Homeland Security Review completed in 2010; updated budgetary information on both homeland security programs and on the homeland security grants that have supported safety and security actions at the state and local levels, as well as in the private sector; and changes in the way the public perceives and receives information about security risk, including the possible elimination of the Homeland Security Advisory System. New chapters that focus specifically on border and transportation security missions. An increased focus on cyber security and infrastructure security, both of which are rapidly growing in importance in the homeland security field among officials at all levels.

Book Information

Hardcover: 688 pages

Publisher: Butterworth-Heinemann; 4 edition (January 17, 2012)

Customer Reviews

"The book doesn't shy away from the controversial choices that have been made in the creation of the U.S. Department of Homeland Security, nor from the tensions that arise from the DHS emphasis on dealing with terrorism against its responsibilities for handling hazards and disasters. It also has some handy data references."--Natural Hazards Observer, November 2013

Jane A. Bullock has worked in emergency management for over 20 years most recently as the Chief of Staff to James Lee Witt the Director of the Federal Emergency Management Agency (FEMA). In this position Ms. Bullock served as principal advisor to the Director on all Agency programmatic and administrative activities, provided advice and recommendations to the Director on policies required to carry out the mission of the agency; managed the day-to-day operations of the Agency; directed, monitored, and evaluated Agency strategic and communication processes; and oversaw administration of the Agency's resources, including the disaster relief fund. Represented the Director and the Administration with Congress, State and municipal governments, foreign officials, constituent groups and the media. Served as a principal spokesperson for the Agency's programs both before, during and after disasters. Chief architect of FEMA's Project Impact: Building Disaster Resistant Communities, a nationwide effort by communities and businesses to implement prevention and risk reduction programs. Principal on a project to create National Disaster Response and Mitigation system for Argentina and in six Central American and Caribbean countries. Served as part of the Clinton Administration's communications team for the Y2K issue. George Haddow currently serves as an Adjunct Professor at the Homeland Security Studies program at Tulane University in New Orleans, LA. Prior to joining academia, Mr. Haddow worked for eight years in the Office of the Director of the Federal Emergency Management Agency (FEMA) as the White House Liaison and the deputy Chief of Staff. He is a founding partner of Bullock and Haddow LLC, a disaster management consulting firm. Damon P. Coppola is a Partner with Bullock and Haddow LLC, a disaster management consulting firm. He has extensive experience in disaster preparedness and planning through his

work with the World Bank Group; The Institute for Crisis, Disaster, and Risk Management; the US Army Corps of Engineers; and the Federal Emergency Management Agency, among others. Mr. Coppola is the author of Introduction to International Disaster Management (Butterworth-Heinemann), and co-author of Introduction to Homeland Security (Butterworth-Heinemann) and Hazards Risk Management (The Federal Emergency Management Agency). He has also been published in several industry journals, including Disaster Prevention and Management, The Beacon, The American Society of Professional Emergency Planners Journal, and The International Association of Emergency Managers Newsletter, among others. Mr. Coppola holds an M.E.M in Crisis, Emergency, and Risk Management from George Washington University.

Choosing a textbook for a course is not usually an easy task -- one must sift through the less substantial books to identify the best available by content, difficulty, readability, extras, etc. Every once in a while authors write a textbook that is outstanding in most respects -- in this case the authors nailed it! They provide excellent coverage of national security, natural and other threats and hazards that face the United States and the many organizations and their responsibilities that respond to them -- the most important being the Department of Homeland Security and its many constituent parts. For completeness and accuracy in content this book is excellent. But be prepared for a cornucopia of very detailed and mundane information -- after all, this is a textbook/reference. The organizational landscape of homeland security -- the structures, roles and relationships of the federal, state, tribal and local entities -- are covered in sufficient detail to provide students with an excellent appreciation of the subject. Not a defect of the book but rather its nature is that it describes how the management and responses to emergencies should be handled, and not so much the actual practice though there are some sections illustrating contemporary responses to disasters interspersed throughout the text. The authors have some definite points of view and I believe that is actually another strength of the book. For example, regarding the creation and original organization of the Department of Homeland Security the authors correctly identify the enfeeblement and defunding of the previously independent FEMA with its predictable and subsequent dire results. Though the U.S. Congress passed post-Katrina legislation to correct the lessened emphasis on natural hazards -- and DHS itself now voices an "all hazards" approach -- whether DHS is the best organizational framework for what are its constituent pieces is not yet clear in my opinion and that of many others. The authors discuss these points and, when relevant, the politics and history of each of the hazards. Even though their points of view are pretty clearly discerned they fairly present the issues and context. Whether you are looking for a textbook or a

reference book then this is the one you should seriously consider purchasing. The two principal authors were long-time FEMA employees who are now industry consultants -- the four authors did an excellent job on this effort.

Lots of good information but the book is a little hard to follow at times.

Bought for college, sold back to . Great deal.

You will find every thing about DHS you want to know. It is the best starting reference that lead you to others in its topics. I recommend for you if you want to have a significant amount of information about DHS within one book.

Very knowledgeable and up-to-date info. Not too hard to read

Right book for the right class

Great Product

Great book
