# Physical Activity Epidemiology - 2nd Edition

## Synopsis

Physical Activity Epidemiology, Second Edition, provides a comprehensive discussion of current population-level studies showing the influence of physical activity on disease. Updated with extensive new research collected in the eight years since the previous edition, the second edition adds the expertise of respected epidemiologist I-Min Lee. To assist readers in understanding the public health significance of physical activity, Dishman, Heath, and Lee present a detailed review of research findings and what those findings suggest regarding the relationship between physical activity and a variety of health risks. The second edition of this groundbreaking text has been exhaustively updated to reflect the wealth of new research published in this fast-moving field of study. With more than 100 pages of additional content, the text also offers more detailed coverage of all-cause and coronary heart disease mortality, expanded coverage of pathophysiology and biological plausibility, new information on physical activity among various racial/ethnic populations, and the effects of physical activity on cognitive function, dementia, and HIV/AIDS. More than 250 tables and figures, twice the number found in the previous edition, highlight the latest epidemiological information in an easy-to-understand visual format. Physical Activity Epidemiology, Second Edition, assists readers in understanding how leisure-time physical activity can enhance people's quantity and quality of life by summarizing the available knowledge, detailing the methods used to obtain it, considering its implications for public health, and outlining the important questions that remain. Readers will find comprehensive discussion of these topics:

- Evidence that physical activity protects against the development of coronary heart disease and stroke and premature death from all causes
- Population-based studies and clinical experiments providing evidence that physical activity and exercise play a role in the primary and secondary prevention of mild hypertension, dyslipidemia, and obesity
- Contemporary epidemiologic evidence that physical activity reduces the risk of type 2 diabetes and osteoporosis and protects against the development of breast and colon cancers, some inflammatory diseases, depression, and anxiety disorders
- Considerations in the promotion of a safe, physically active lifestyle among all segments of the population

Physical Activity Epidemiology, Second Edition, will engage and challenge students by examining the state of current research in all of its variation and even ambiguity. The text details the methodology and findings of classic and contemporary studies and then helps students begin to analyze the results. Special Strength of the Evidence sections found at the end of most chapters summarize the findings to determine the extent to which correlation and causation can be proven. Chapter objectives, chapter summaries, and sidebars in each chapter assist students in focusing on the key points of study, and an

extensive glossary with detailed definitions provides a handy reference for review. Instructors will find a new image bank in this edition to enhance their class lecture materials. *Physical Activity Epidemiology, Second Edition*, offers students, sport and exercise scientists, health and fitness professionals, and public health administrators a comprehensive presentation of significant studies, how these studies contribute to understanding the relationship between activity and disease prevention, and how this information can be used in leading individuals, communities, and global society toward increased health and longevity.

## **Book Information**

Hardcover: 608 pages

Publisher: Human Kinetics; 2 edition (August 29, 2012)

Language: English

ISBN-10: 0736082867

ISBN-13: 978-0736082860

Product Dimensions: 8.7 x 1.3 x 11 inches

Shipping Weight: 3.5 pounds (View shipping rates and policies)

Average Customer Review: 4.1 out of 5 stars 6 customer reviews

Best Sellers Rank: #96,967 in Books (See Top 100 in Books) #37 in [Books > Textbooks > Medicine & Health Sciences > Research > Biostatistics](#) #52 in [Books > Medical Books > Basic Sciences > Biostatistics](#) #103 in [Books > Textbooks > Medicine & Health Sciences > Research > Epidemiology](#)

## **Customer Reviews**

Rod K. Dishman, PhD, is a professor of exercise science, adjunct professor of psychology, and the director of the Exercise Psychology Laboratory at the University of Georgia at Athens. He is also adjunct professor in the Arnold School of Public Health at the University of South Carolina at Columbia. Dr. Dishman is a reviewer for more than 50 journals, including *Journal of the American Medical Association (JAMA)* and *American Journal of Public Health*. He has served on editorial boards of numerous journals in preventive medicine and public health, such as *Exercise and Sport Science Reviews*, *Medicine & Science in Sports & Exercise*, and *Health Psychology* and as an exercise consultant to public health agencies in the United States, Canada, and Europe. He has published approximately 150 peer-reviewed articles and written or edited several books related to physical activity and health. Dr. Dishman is an American College of Sports Medicine fellow, where he has served as a member of the Research Advisory Committee and the Board of Trustees. He

was a member of the jury for selection of the Olympic Prize in Sport Sciences awarded by the International Olympic Committee's Medical Commission and served on the scientific advisory committee for the 2008 Physical Activity Guidelines for Americans. He resides in Athens, Georgia.

Gregory Heath, DHSc, MPH, has been contributing to the field of exercise science and health promotion for over 25 years. Dr. Heath is Guerry professor and head of the department of health and human performance at the University of Tennessee at Chattanooga. Previously, he worked at the Centers for Disease Control and Prevention as lead health scientist in the Physical Activity and Health Branch. He has extensive experience in conducting studies and data analyses in the areas of physical activity epidemiology and public health practice. Dr. Heath is a fellow in the Council on Epidemiology and Prevention, the American Heart Association, and the American College of Sports Medicine. He earned his doctor of health science degree in applied physiology and nutrition and his master's of public health in epidemiology from Loma Linda University.

I-Min Lee, MBBS, MPH, ScD, is an associate professor of medicine at Harvard Medical School, an associate professor of epidemiology at Harvard School of Public Health, and associate epidemiologist at Brigham and Women's Hospital in Boston. Her main research interest is in the role of physical activity in promoting health and preventing chronic disease. This extends to characteristics associated with a physically active way of life, such as maintenance of ideal body weight. She also is concerned with issues relating to women's health. Lee has published more than 190 peer-reviewed articles and is a frequent invited presenter, teacher, and speaker at local, national, and international levels. A reviewer for 30 journals, including Lancet and New England Journal of Medicine, Lee also serves on the editorial board for Harvard Women's Health Watch, Medicine & Science in Sports & Exercise, and the Brazilian Journal of Physical Activity and Health. Lee is an elected member of the American Epidemiological Society and a member of the Society for Epidemiologic Research, the American Heart Association, and the International Society for Physical Activity and Health. She is a member and fellow of the American College of Sports Medicine (ACSM) and has served on the ACSM's Research Advisory Committee and Board of Trustees. Dr. Lee also served on the scientific advisory committee for the 2008 Physical Activity Guidelines for Americans. Lee is the recipient of numerous awards and recognitions, in particular the Young Epidemiologist Award from the Royal Society of Medicine in the United Kingdom (1999); the William G. Anderson Award from the American Alliance for Health, Physical Education, Recreation and Dance (2007); the Charles C. Shepard Award from the Centers for Disease Control and Prevention (2009); and the ACSM's Citation Award (2011). Lee resides in Brookline, Massachusetts.

A very complete guide to introduce students and beginners in the Physical activity and health field under an epidemiological perspective.

The cover was almost completely torn away from the pages.

Good condition, no complaints, minimal writing inside

Excellent product!

Professor wrote it. Leading Physical Activity Epidemiologist and it explains the topic quite well. If you are looking for a college course this is the one to get

Great condition, good read!
