Marilyn J. Hockenberry, PhD, RN-CS, PNP, FAAN, Director, Center for Clinical Research; Nurse Scientist, Texas Children's Hospital; Director of Nurse Practitioners, Texas Children's Cancer Center; Professor, Department of Pediatrics, Baylor College of Medicine, Houston, TX --This text refers to an out of print or unavailable edition of this title.

This book was required for my nursing school - BSN program. I feel the selection of books my program chose were all very informative, to the point and we used the books for the classes that required them. During nursing school most people do not know where their career will take them, there are so many options the RN has available, so building a strong foundation is essential to success in the field. Nursing books are not written to be entertaining they are for educational purpose only. This book definitely offered education. After you graduate school and chose a path then find the best reference book you can find and carry it with you until the day you retire. I always recommend the additional study guide to a book if one is available.

This is key information that is easy to access from the textbook but I honestly don't think it is worth the money for the amount of time that I have actually used it. Good reference but nothing different than the textbook itself. good care plans and information on assessments that are different than adult in an easy to read format. Good book and good information just didn't use it as much as I had anticipated!

Perfect for my Pediatric Nursing School courses.

It was helpful to an extent. Obviously when you write a care plan you need to individualize it.

As described. This was required for school.

I love this book! My clinical teacher recommended it to help with my care plan and assessment. This has been a wonderful tool to use during my pediatric rotation!

Easy read...
