Sierra Nevada Natural History: An Illustrated Handbook

Synopsis

The magnificent and much-loved Sierra Nevada, called the "Range of Light" by John Muir, is the dominant feature on the California landscape. First published forty years ago, this handbook has become an enduring natural history classic, used by thousands to learn more about virtually every aspect of this spectacular mountain range; from its superb flora and fauna to its rugged topography. Comprehensive yet concise and portable, the book describes hundreds of species: trees and shrubs, flowering plants and ferns, fungi and lichens, insects and fish, amphibians and reptiles, and birds and mammals. Now completely updated and revised, it will continue to be the essential guide to the Sierra Nevada for a new generation of hikers, campers, tourists, naturalists, students, and teachers; everyone who wants to know more about this unique and beautiful mountain range. * Describes more than 750 of the species most likely to be encountered with more than 500 new color photographs and 218 detailed black-and-white drawings* Includes engaging and accessible introductory sections on Sierra Nevada topography, climate, geological history, and human history* The compact, updated species accounts make identification easy, provide informative remarks on ecology and life history, and note which species are threatened or endangered --This text refers to an out of print or unavailable edition of this title.

Book Information

Paperback: 374 pages

Publisher: University of California Press (November 1, 1963)

Language: English

ISBN-10: 0520012275

ISBN-13: 978-0520012271

Product Dimensions: 1 x 5.2 x 7.8 inches

Shipping Weight: 1.4 pounds

Average Customer Review: 5.0 out of 5 stars 2 customer reviews

Customer Reviews

Over 750 easily understandable (for the lay reader) yet scientifically accurate descriptions are accompanied by excellent drawings and a section of 24 color plates. -- American Scientist

"In this single, portable volume there is enough information to satisfy the most voracious naturalist, whether Sierra resident or visitor, while also providing a wealth of useful illustrations (maps, line drawings, color photos) to assist in field identification. This is the book that can easily go backpacking with the plant enthusiast, birder, or butterfly collector."#151;Bruce Pavlik, Series Editor, California Natural History Guide Series and author of Oaks of California"Storer and Usingerâ™s Sierra Nevada Natural History is the only book that covers so many aspects of this region's natural history in a compact form. I am thrilled to see that David Lukas has made the careful revisions necessary to update this classic book and make it even more useful and comprehensive. I plan to take it on every hike."#151;Edward C. Beedy, author of Discovering Sierra Birds --This text refers to an out of print or unavailable edition of this title.

This is the book that took me through too many nights, and early morning units of biology and on into my Masters Studies. A quick reference book that has most of your common everythings on it -- it gets you into a ballpark and usually that is close enough for almost everyone. Plants, birds, mammals, reptiles, fish, insects --- it is all here in one place and the big bonus is that it weighs about 300 pounds less than a set of professional reference books. If I could take only one book with me camping or hiking in the Sierra, this would be the one. And don't forget your 5x and 10x Loupes.

A guide for the times. Very informative. Takes the student naturalist and supplies them with real facts. Seamless transaction. Just clicked and within a few days, the book arrived.
