# All-in-One Care Planning Resource: Medical-Surgical, Pediatric, Maternity, And Psychiatric Nursing Care Plans (All-In-One Care Planning Resource: Med-Surg, Peds, Maternity, & Psychiatric Nursing)

## Synopsis

Unlike any other care plan book on the market, this resource contains selected care plans for pediatric, maternity, and psychiatric nursing in addition to medical-surgical nursing care plans for adult care. This is the only care planning resource that allows you to use one book throughout your nursing curriculum. Color-coded medical-surgical, maternity, pediatric, and psychiatric sections help you quickly find each content area while giving the book a full-color look and feel. Clinical experts update each subject area to ensure the most current, accurate, and clinically relevant content available. Each care plan employs a consistent format of Overview/Pathophysiology, Health Care Setting, Assessment, Diagnostic Tests, Nursing Diagnoses, Desired Outcomes, Interventions with Rationales, and Patient-Family Teaching and Discharge Planning. An open and attractive two-color design facilitates quick and easy retrieval of information. Nursing interventions and rationales are listed in a clear two-column format to make the information more accessible. Related NIC intervention and NOC outcome labels are listed for each nursing diagnosis. The Patient-Family Teaching and Discharge Planning section highlights key patient education topics and list resources for further information. Health Care Setting is specified for each care plan, since different conditions are treated in various settings such as hospital, primary care, long-term care facility, community, and home care. Outcome criteria with specific timelines enable nurses to set realistic goals for nursing outcomes and provide quality, cost-effective care. Detailed rationales for each nursing intervention help you to apply concepts to clinical practice. Includes the most recent NANDA Taxonomy II nursing diagnoses. Separate care plans on Pain and Palliative and End-of-Life Care focus on palliative care for patients with terminal illnesses, as well as relief of acute and chronic pain. A new "Overview/Pathophysiology" heading helps you easily locate this key content. Nursing diagnoses listed in order of importance/physiologic need helps you learn about prioritization. All content has been thoroughly updated to cover the latest clinical developments, including the most recent JNC7 hypertension guidelines, the latest breast cancer screening and treatment information, revised cholesterol parameters, new drug therapies, and much more. Patient teaching content and abbreviations have been thoroughly revised to reflect the latest JCAHO guidelines. Expanded and clarified rationales help you understand each intervention more clearly.

## Customer Reviews

If anyone has had as much difficulty finding the perfect book as I have, they know what's up. So I literally spent 20 hours of research searching for the PERFECT care plan book. After my exhaustive study, I found this little dream of a book!! So why this one?? I chose this book because it gives you EVERYTHING you need to create an A+++ care plan. It includes disease processes, the nursing diagnosis related to the said medical condition, outcomes, and the best part- it includes both interventions with ALL the scientific rationales in an easy to read and fluent manner that makes writing up those dreaded care plans a breeze!! I would strongly recommend this book due to its all inclusive style and really mean it when I say "This is the best care plan book ever". I bought the 2nd edition which was way cheaper than the newer version for pennies on the dollar and it is just as good as the one's my friends bought for \$50 dollars. It's a must have and can be used for all areas of study as it includes Med Surg, Psych, Peds, and OB sections, so you can literally use it all through school!! I am thrilled and I usually don't leave reviews but I hope you take my word that this book is a MUST HAVE!! :)K.C.BSN Student

Great book. Helped me get my RN license.

Great book!

Love the way the book is organized by topic / issue compared to another RN Dx book I've had to purchase in the past based on the school's recommendation. Especially love how this book breaks down the sections for Knowledge deficit and Discharge planning in addition to the standard actual and potential RN Dx.

Very helpful for case study project that I had for nursing school. I would recommend any nursing student to buy this book. It is really helpful for those that have difficulty with nursing care plans during clinicals.

I bought this book to help write care plans for pediatrics. It is a pretty good book and very easy to use. The pathophysiology in the book is pretty simple so I had to use other resources for that. I found repeating interventions with repeating rationals for several of the peds careplans. It did save me time from searching peer reviewed rationals specific to pediatrics. I would recommend the book as a source but it probably isn't going to help you write your entire careplan. I hope to be able to use again for mental health careplans.

I've looked over a number of NANDA books.. this one is the best I've found by FAR! organized in a logical way and the interventions aren't just creative rewordings of the problem, and the justifications aren't just creative rewordings of the interventions! I returned the book my school said to get and got this one instead! my NCPs have never been easier!

Good book IF your specific care plan is in there. I prefer books with lists of all nursing diagnosis and interventions, etc. I probably should not have bought this as I find all in one care plan books not as useful. As we all know case studies in school leave us with patients with multiple comorbidities so if you have to address them all, the all in ones are not the greatest- go with a book of nursing diagnoses. If you prefer the care plans based on single diagnoses, then not a bad book but you have to be addressing one diagnosis.
