# Biomaterials For Clinical Applications

## Synopsis

Biomaterials for Clinical Applications is organized according to the World Health Organization's report of the top 11 causes of death worldwide, and lays out opportunities for both biomaterials scientists and physicians to tackle each of these leading contributors to mortality. The introductory chapter discusses the global burden of disease. Each of the subsequent eleven chapters focuses on a specific disease process, beginning with the leading cause of death worldwide, cardiovascular disease. The chapters start with describing diseases where clinical needs are most pressing, and then envisions how biomaterials can be designed to address these needs, instead of the more technologically centered approach favored by most books in the field. This book, then, should appeal to chemical engineers and bioengineers who are designing new biomaterials for drug delivery and vaccine delivery, as well as tissue engineering.

## Book Information

Hardcover: 275 pages

Publisher: Springer; 2010 edition (September 9, 2010)

Language: English

ISBN-10: 1441969195

ISBN-13: 978-1441969194

Product Dimensions: 6.3 x 0.8 x 9.3 inches

Shipping Weight: 1.5 pounds (View shipping rates and policies)

## Customer Reviews

This book is organized according to the World Health Organization's report of the top 10 causes of death worldwide, and lays out opportunities for both biomaterials scientists and physicians to confront each of these leading contributors to mortality. The introductory chapter discusses the global burden of disease. Each of the subsequent ten chapters focuses on a specific disease process, beginning with the leading cause of death worldwide, cardiovascular disease. Each chapter begins by describing diseases in which clinical needs are most pressing, and then envisions how biomaterials can be designed to address these needs. The approach is clinically

centered, in contrast to the more technologically centered approach favored by most books in the field. This book bridges the gap between the laboratory and the clinic by identifying needs for biomedical materials in the context of the most prevalent diseases worldwide. Sujata K. Bhatia is a physician-scientist at DuPont Applied BioSciences, and an affiliated faculty member in the Department of Chemical Engineering at the University of Delaware.

Sujata K. Bhatia is a physician-scientist at DuPont Applied BioSciences, and an affiliated faculty member in the Department of Chemical Engineering at the University of Delaware. She earned three bachelor's degrees, in biology, biochemistry, and chemical engineering, and a master's degree in chemical engineering at the University of Delaware. She then attended the University of Pennsylvania School of Medicine, where she earned her MD and PhD in bioengineering. She currently contributes to medical biomaterials projects, as well as health and nutrition programs at DuPont. She teaches biochemical engineering and biomedical engineering courses at the University of Delaware.
