As I travel throughout the US working with physicians, I am struck that their major complaints about residency are not about grueling hours or failure to learn judgment and technique. Their most common complaints, by far, are that they feel poorly prepared to deal with the practice of medicine. Marc Halley's latest book on starting a practice is loaded with practical suggestions about employment vs. entrepreneurship, practice location, family issues, competition, payer considerations, and financial performance evaluation. Becoming familiar with the topics in this book will facilitate physicians' becoming more comfortable with one of their most important life decisionshow and where they will practice. My only regret is that Marc Halley did not write it in a previous century, so that I could have read it before I took my first job! Kenneth H. The Medical Practice Start-Up Guide is edited by Halley Consulting Group, LLC, President and CEO Marc D. Halley, MBA, and Vice President of Operations, Michael J. Ferry, MPA. The Halley Consulting Group draws on more than 100 years of combined experience managing independent physician-owned and hospital-owned practices, primary care practices, internal medicine subspecialty groups and surgical practice specialties. In addition to working with new practices, Halley has helped turn around the performance of numerous practices and networks.

This is a very comprehensive guide for starting a medical practice. It includes step-by-step instructions for just about all aspects of getting started. That being said, I strongly advise that every doctor engage a good team of professionals. I don't think that you could read a book and open a practice. But as an overview to give you the big picture and make sure you're getting it all done - great!

Book is good. Some helpful info, but nothing mindblowing. Probably depends on how much research you have already done on starting up your own practice.

Professional success and business success require very different skills in any specialty. But medical

practice owners have especially hard time because they often operate in adversarial environment, where patients sue them for malpractice and payers delay or underpay insurance claims. Unfortunately, most medical schools spend no time at all preparing doctors for starting a practice. Worse, the fresh entrepreneur is often unaware of missing knowledge and is unable to navigate the complexities of planning and protecting business, selecting adequate technology, managing staff, and most importantly, getting paid. Invest the time it takes you to read this book back into your daily practice. If you get through this book in fifteen hours, and if you use just three ideas out of hundreds, and if each one idea saves you just 1/100th of your daily working time and effort--that will be a savings of 60 hours per year, or a net annual profit on time invested of 300%. Do you know of any other investment that nets you 300% annually? Yuval Lirov, Ã Â Practicing Profitability - Billing Network Effect for Revenue Cycle Control in Healthcare Clinics and Chiropractic Offices: Collections, Audit Risk, SOAP Notes, Scheduling, Care Plans, and Coding

This is a must read for any physician thinking about starting a medical practice. With shrinking reimbursement for medical services one may conclude, after reading this excellent guide, that a private practice start up is not an economically smart move.
